## REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The arguments presented by applicant in the amendment of September 21, 2007. It is noted that applicant's Attachment A, Fig. 2, shows that the enclosed angle is approximately 4°. The examiner believes the claim actually limits the device to an angle between the mid-central plane of the first application member and the mid-central plane of the second application member rather than between the mid-central plane of the first application member and the longitudinal axis of the applicator. Nevertheless, the former interpretation of the claim limitation would still yield an angle of only approximately 8°.

As shown in the embodiment of Fig. 3 of Manusch et al. shows that the application members can be rotated with respect to each other, but an analysis of Fig. 3 suggests that the application members cannot be rotated so far as to enclose an angle of 30°. Even if it were possible to achieve an enclosed angle of 30°, Manusch et al. does not provide any motivation for making the device in that orientation; Figs. 1-3 of Manusch et al. each show effective transfer with enclosed angles far less than 30°.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
